

# Numerical methods for conservation laws

Hans Burchard and Lars Umlauf

May 23, 2011

# Contents

<b>1</b>	<b>Introduction</b>	<b>3</b>
1.1	Motivation . . . . .	3
1.2	Historical remarks . . . . .	9
1.3	Differential operators . . . . .	14
1.4	Ordinary differential equations . . . . .	14
1.5	Partial differential equations . . . . .	16
<b>2</b>	<b>Finite difference schemes</b>	<b>18</b>
2.1	Accuracy and consistency . . . . .	18
2.2	Stability and convergence . . . . .	20
2.2.1	The energy method . . . . .	21
2.2.2	Von Neumann's method . . . . .	22
2.2.3	Courant-Friedrichs-Lewy condition . . . . .	24
2.3	Time differencing . . . . .	24
2.3.1	One-stage two level schemes . . . . .	26
2.3.2	Multi-stage two level schemes . . . . .	28
2.3.3	Three level schemes . . . . .	29
<b>3</b>	<b>Discretisation of shallow water equations</b>	<b>31</b>
3.1	Staggered grids . . . . .	31
3.2	Stability of schemes for irrotational flows . . . . .	33
3.3	Stability of schemes for rotational flows . . . . .	36
3.4	Implicit schemes . . . . .	37
3.4.1	Two-dimensional implicit schemes . . . . .	37
3.4.2	ADI schemes . . . . .	39
3.5	Strategies for 3D models . . . . .	40
<b>4</b>	<b>Finite volume schemes</b>	<b>43</b>
4.1	Conservative formulation . . . . .	43
4.2	Monotonicity and Total Variation . . . . .	46
4.3	Monotone schemes . . . . .	49
