

Turbulence in natural waters

Hans Burchard and Lars Umlauf

October 20, 2008

Contents

1	Phenomenology of turbulence	3
1.1	Coffee with milk ?	3
1.2	How efficient is molecular mixing in the ocean ?	4
1.3	Observational evidence of turbulence	5
1.3.1	Laboratory experiments	5
1.3.2	Oceanic observations	9
1.4	Definition of turbulence	15
1.5	Turbulence as chaotic nonlinear system	15
2	Deterministic description	20
2.1	Some vector notations and transformations	20
2.2	Navier-Stokes equation	21
2.2.1	Scaling of the Navier-Stokes equation	22
2.2.2	Elimination of pressure	23
2.2.3	Kinetic energy from the Navier-Stokes equation	24
2.2.4	Vorticity equation	24
2.3	Thermal energy and salinity equation	27
3	Statistical description	29
3.1	Reynolds decomposition	29
3.2	The Reynold's equations	33
3.3	The second moment equations	35
4	Turbulence spectra	38
4.1	Correlations and spectra	38
4.2	Three-dimensional kinetic energy spectra	43
4.3	One-dimensional kinetic energy spectra	45
5	Statistical turbulence models	52
5.1	Eddy viscosity principle	52
5.2	Mixing length approach	54
5.3	Bottom boundary layer	54
5.4	Turbulence equilibrium	57
5.5	Dynamic turbulence models	59
5.5.1	Boundary conditions	59
5.5.2	The k - ε model	59

6	Marine turbulence observations	61
6.1	Acoustic Doppler Current Profiler (ADCP)	61
6.1.1	Basic principle of ADCPs	61
6.1.2	Turbulence observations with ADCPs	62
6.2	Micro-structure shear probes	65
