- 1. Cruise No:** EMB162
- 2. Dates of the cruise:** from 10.08.2017 to 23.08.2017
- 3. Particulars of the research vessel:**
Name: Elisabeth Mann Borgese
Nationality: Germany
Operating Authority: Baltic Sea Research Institute (BSRI) Warnemünde
- 4. Geographical area in which ship has operated:**
Baltic Sea
- 5. Dates and names of ports of call**
11.08.2017-13.08.2017 Rostock
- 6. Purpose of the cruise**
BSH Baltic Sea monitoring program, long term observations of IOW, deployment of the profiling mooring GODESS
- 7. Crew:**
Name of master: Timo Kaufmann
Number of crew: 12
- 8. Research staff:**
Chief scientist: Prof. Dr. Joanna Waniek

Scientists: 2

Engineers: not applicable

Technicians: 9

Students: 2

Observer: 1
- 9. Co-operating institutions:**
University Szczecin, Poland
- 10. Scientific equipment**
CTD, mooring GODESS, plankton and zooplankton net, Secchi disk
- 11. General remarks and preliminary result**

11.1 Objectives

The cruise EMB-162 was carried out as a joined cruise of the environmental monitoring programme of the Federal Maritime and Hydrographic Agency (BSH) and the Baltic Sea long-term observation programme of the Leibniz Institute for Baltic Sea Research Warnemünde (IOW). It was the fourth cruise in 2017 in the series of five expeditions performed each year. The acquired data are used for

the regular national and international assessments of the state of the Baltic Sea, and provide the scientific basis for measures to be taken for the protection of the Baltic Sea ecosystem. A special focus of the cruise was to monitor the consequences of the series of Major Baltic Inflows that occurred between 2014 and 2016 for the environmental conditions of the central Baltic.

11.2 Narrative of the cruise

Embarkation of the scientific crew was on 10th August at 7:00 AM. The research campaign started at 8:00 AM in Rostock-Marienehe, with the ship heading north for the first stations until the Cadet Furrow and then to the west to cover stations in Mecklenburg Bay and Kiel Bay. Afterwards we turned to Southeast to reach Lübeck Bay as the next working area. Station work usually comprises hydrographic measurements by means of a CTD and oxygen determinations by Winkler titration, dissolved and particulate nutrient as well as organic carbon determinations on selected stations. At noon on the 11th of August under good condition EMB interrupted the scientific work and returned to Rostock-Marienehe to allow the preparations for Hanse Sail next day to take place. At 2pm the ship arrived in Rostock-Marienehe.

On 12th of August guests of Prof. Kleinert, the leader of the Leibniz-Association together with invited visitors was on board while EMB cruised along the river Warnow as a part of the Hanse Sail 2017. From 10am to 4pm the scientific crew provided information about the ship, the Baltic Sea, the purpose of the cruise as well as demonstrated the work of the CTD for interested guest. On 13th of August the departure for the cruise was unfortunately delayed until lunch time, as once of the ship officers had to be replaced because of sickness.

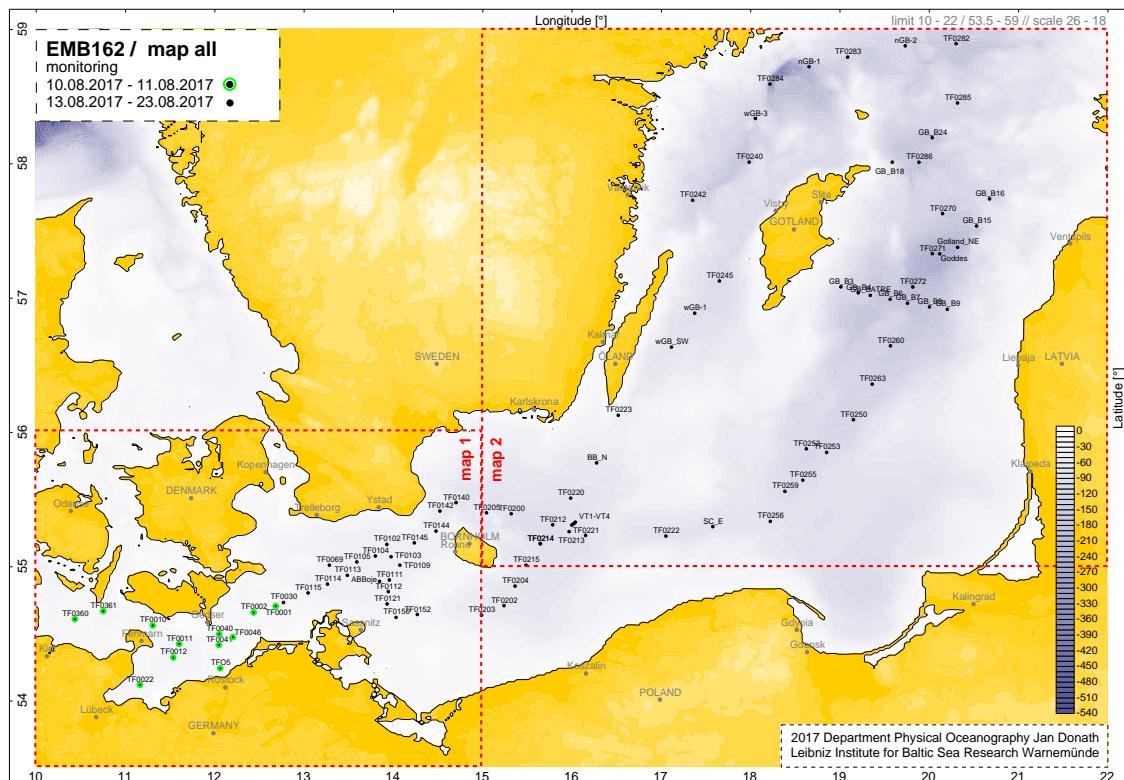

Figure 1: Stations (black crosses) occupied during the cruise EMB162 from 10th – 23rd August 2017.

Finally, on 13th of August at 12:00 the EMB left Marienehe to continue and finish the work scheduled for the cruise. On 16th of august the GODESS mooring was deployed in the eastern Gotland Basin and the hydrographic work continued without any difficulties under calm weather conditions (Fig. 1).

On August 23rd at 8:00am EMB reached Rostock-Marienehe and the cruise EMB-162 terminated. Cruise participants started uploading the instruments and equipment immediately after the custom inspection. All gear was off the ship at 11:00am and participants drove to IOW.

11.3 Rationale

The cruise EMB162 was carried out in the frame of the Baltic monitoring programme (BMP), and is related to the Baltic long term observation programme of the (IOW). Data collection covered the western and central Baltic from the Kiel Bight to the northern Gotland Basin. The majority of stations are located in the German territorial waters and along the thalweg transect of the Baltic Sea. The thalweg stretches from the Darss sill via the Arkona Sea, the Bornholm Sea, and the eastern Gotland Sea basin to the northern Gotland Sea and the Landsort Deep. Along the southern rim of the eastern Gotland Basin a west to east transect of CTD stations was carried out, in order to gather information about the spatial distribution of the saline water masses of recent MBIs. Additionally, a number of CTD casts were carried out at selected stations in the northern Gotland Sea to figure out the fate of the inflowing water (Fig.1-3, and the list of stations in the Appendix).

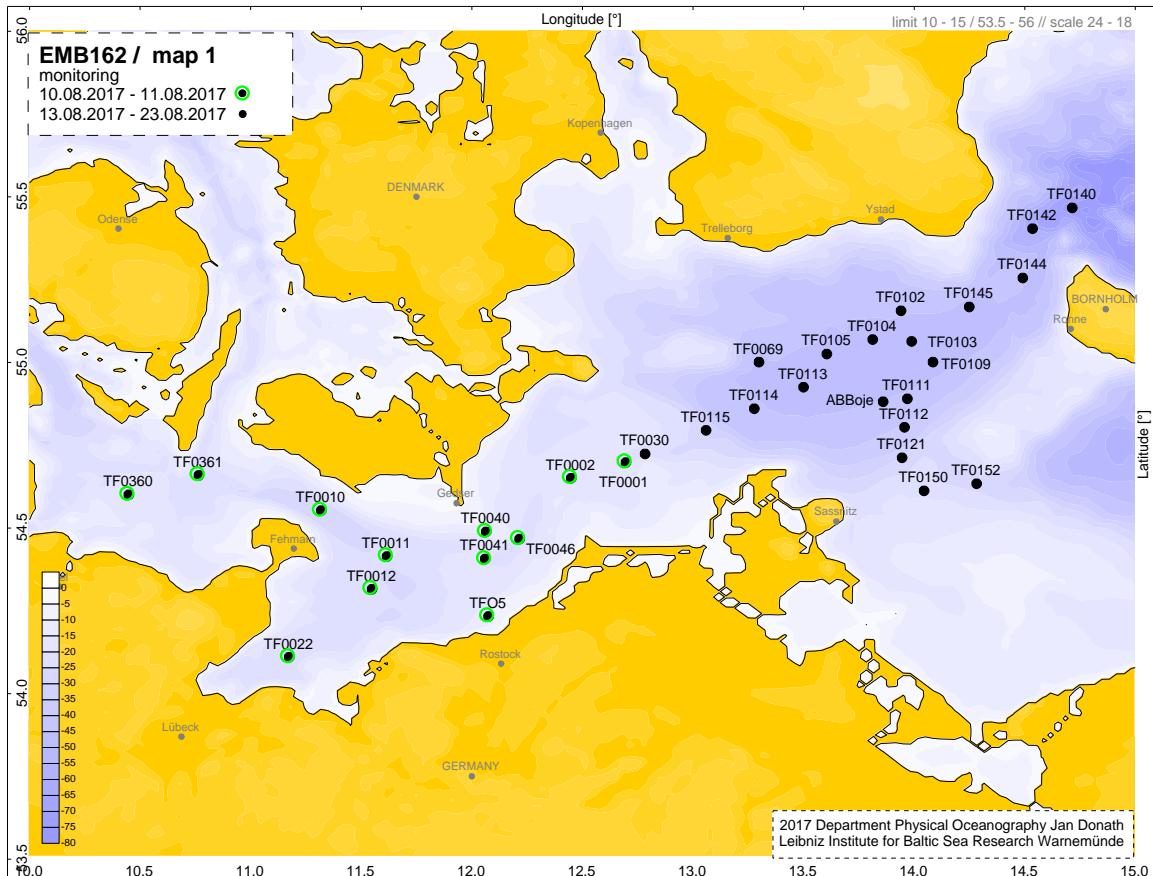

Figure 2: Stations (black dots) in the western Baltic Sea and the Arkona Sea during the cruise EMB 162.

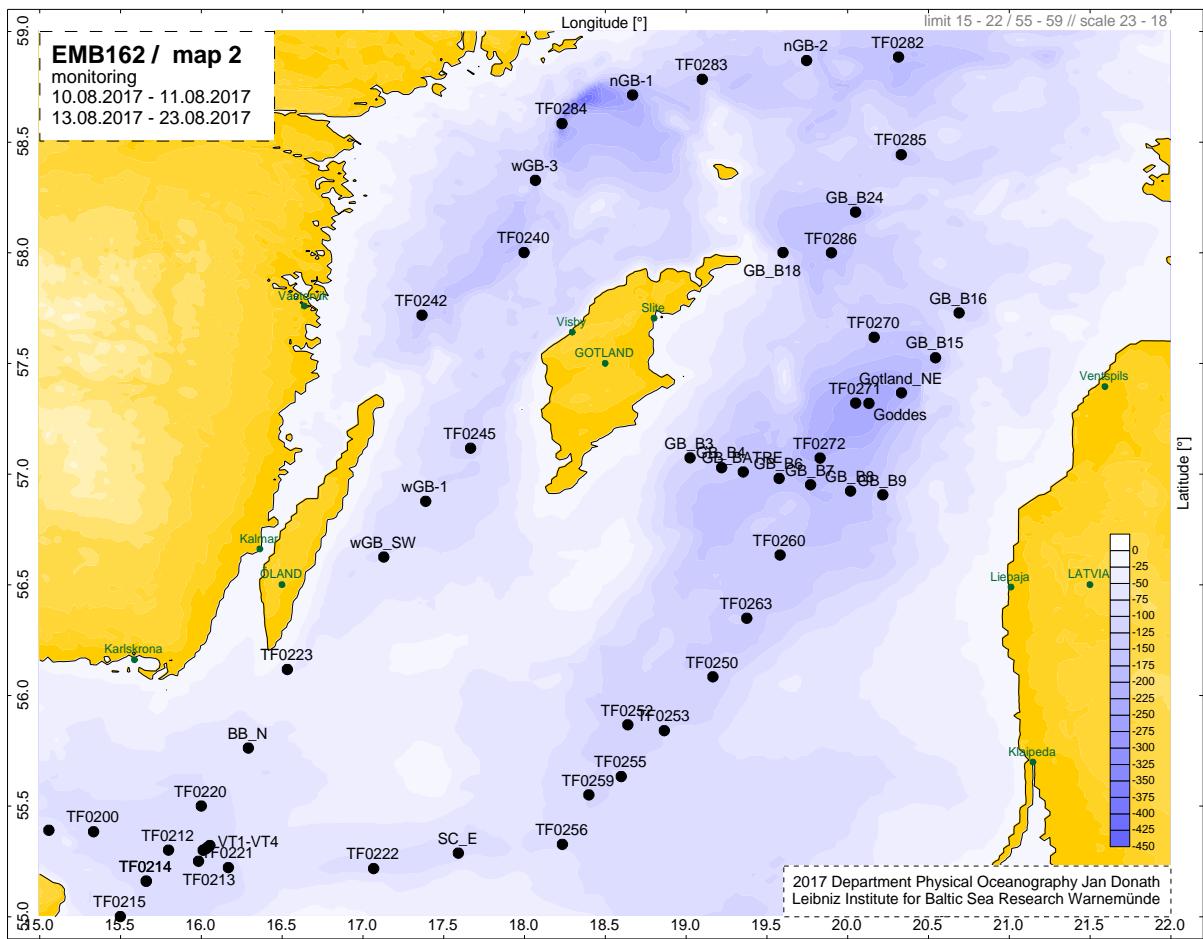

Figure 3: Stations (black dots) in the Bornholm Sea and the Gotland Sea during the cruise EMB162.

Station work

The station name is complemented for the respective cruise EMB162 by a station number. The station number is based on a consecutive numbering of all stations during the cruise. The station work usually started with a CTD cast and already programmed sampling on standard depth levels. Then other CTD casts followed to meet the water sample requirements on the respective station. Net sampling, depth of visibility determinations by means of a Secci disk, and phyto/zooplankton net were taken on selected stations (Fig. 1-3).

CTD and Sampling

The CTD-system "SBE 911plus" (SEABIRD-ELECTRONICS, USA) was used to measure the variables: Pressure, Temperature (2x SBE 3), Conductivity (2x SBE 4), Oxygen concentration (2x SBE 43), Chlorophyll-a fluorescence (683nm), Turbidity, Photosynthetic Active Radiation in water (PAR), and above the sea (SPAR). The Rosette water sampler was equipped with 13 Free Flow bottles of 5 L volume each. The CTD sensors were checked during the cruise by comparison measurements. In detail, for temperature a high precision thermometer SBE RT35 was used. Salinity samples were taken for measurement after the cruise by means of a salinometer. Slope and offset of the oxygen sensors SBE 43 are determined by comparison with Winkler titration.

Underway measurements

The FS Elisabeth Mann Borgese is equipped with sensors to measure weather

parameters, surface water properties by means of a surface water pumping system with attached sensors (e.g., thermosalinograph, fluorometer), navigation information, rope length, winch speed etc.

Inorganic nutrients

Nitrate, nitrite, phosphate, and silicate were analysed using standard colorimetric methods by means of an autoanalyser (FlowSys, Alliance-Instruments, Ainring, Germany) and Ammonium was determined manually as indophenole blue (Grasshoff et al., 1999) from water filtered through glass-fiber filters GF/F immediately after sampling.

Oxygen and Hydrogensulfide

Oxygen was analysed by Winkler titration and hydrogensulfide was determined spectrophotometrically by Methylene Blue reaction (Grasshoff et al., 1999). For comparison, H₂S concentration was transformed to negative oxygen values according to its reduction capacity: H₂S + 2 O₂ -> H₂SO₄. During CTD casts the SBE 43 oxygen sensor (duplicate installation) recorded oxygen values that are validated by Winkler titration results.

Plankton sampling

Plankton sampling was performed by means of a rosette sampler (combined with CTD) as well as with a small phytoplankton net and the zooplankton nets WP2 and Apstein. Samples were taken in a tight follow up of depths levels in order to get representative data from the euphotic zone. Additionally, samples for microbiological analyses were taken at some stations in the central Baltic, the Gotland Deep and Landsort Deep.

Long term investigations of CH₄, N₂O and CO₂ distribution

Sampling for simultaneous CH₄ and N₂O observation was carried out in frame of an accompanying project for long term data collection. All samples were fixed with 500 µL saturated HgCl₂-solution to prevent microbiological activity and stored dark. Responsibility for this data lies by Prof. Gregor Rehder (IOW, Marine Chemistry).

One complete depth profile was sampled at station TF0271 for the long term data collection of CT, AT, and pH. Also these samples were fixed with 500 µL saturated HgCl₂-solution to prevent microbiological activity and stored dark (Responsible Scientist: Dr. B. Schneider, IOW, Marine Chemistry).

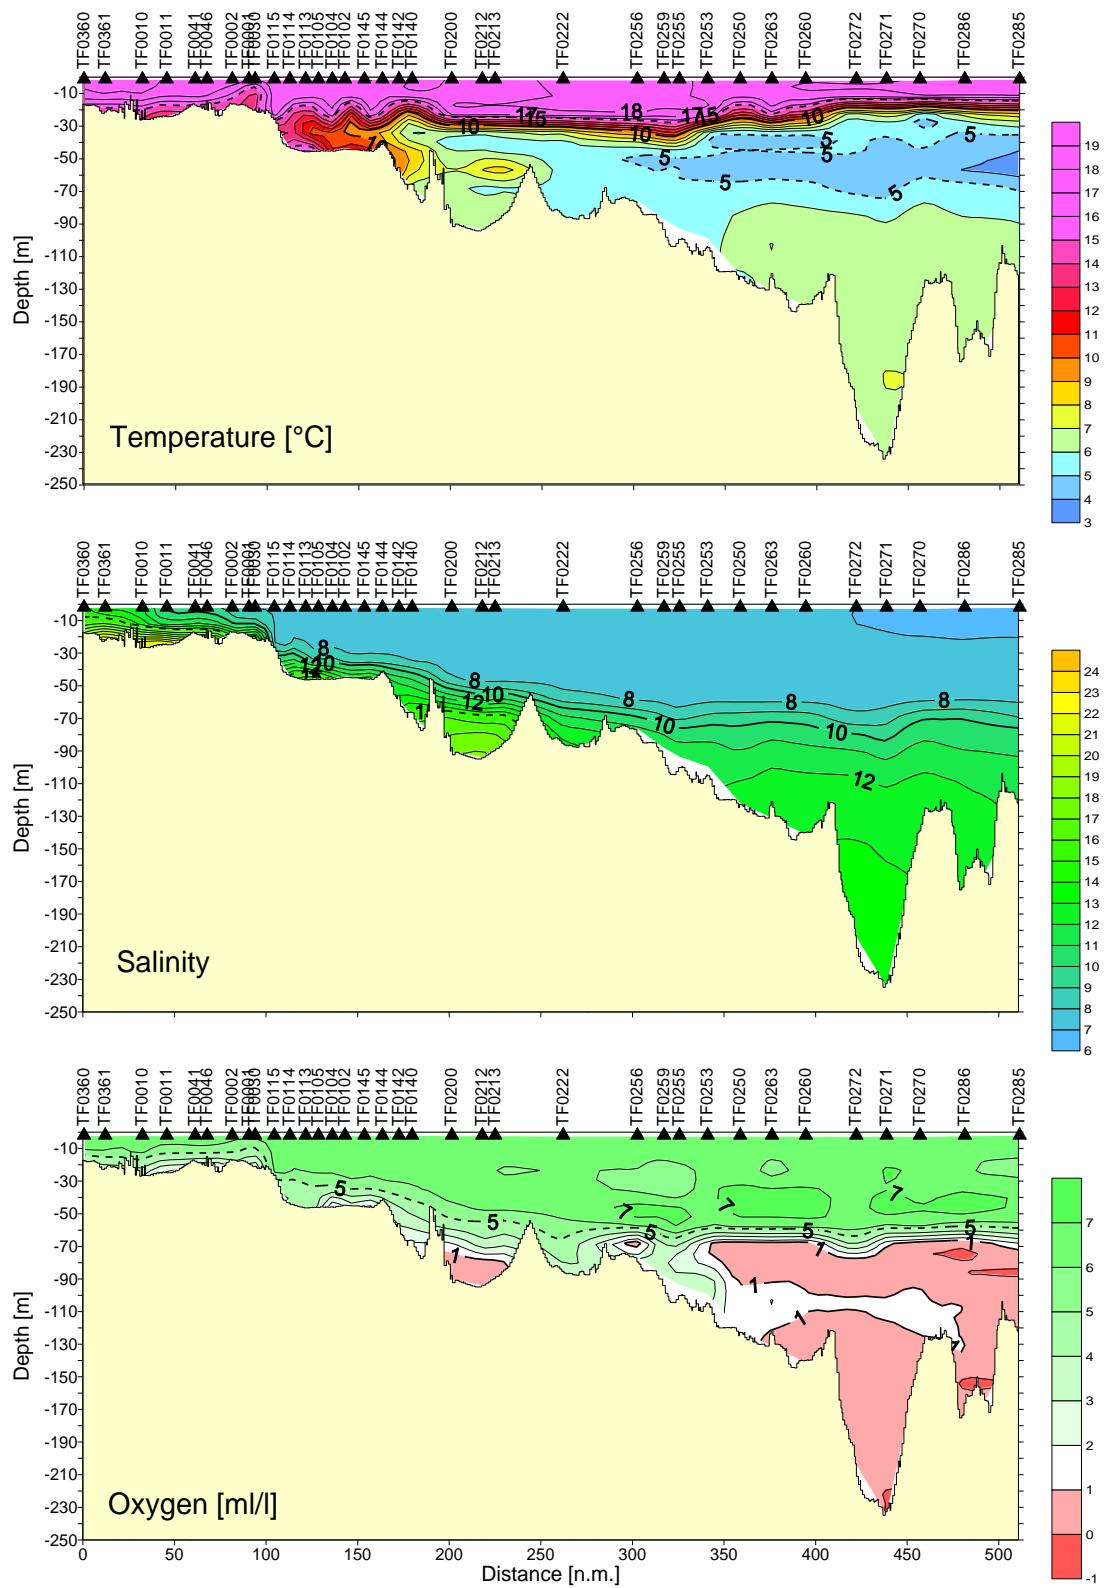

Mooring work

In the eastern Gotland Basin at 57°19.219N, 20°07.994E the profiling mooring GODESS was deployed for a three month period and will collect data by lifting the instruments every 9h between 180 m and 30 m depth.

EMB162 - Monitoring

Kiel Bight - Gotland Sea

Ric Bight - Gotland Sea
10.08.2017 15:19 - 17.08.2017 22:26 UTC

Figure 4: Distribution of temperature, salinity and dissolved oxygen along the thalweg of the Baltic Sea from the Kiel Bight to the eastern Gotland Basin. The figure is based on the preliminary CTD data measured during the EMB162 cruise.

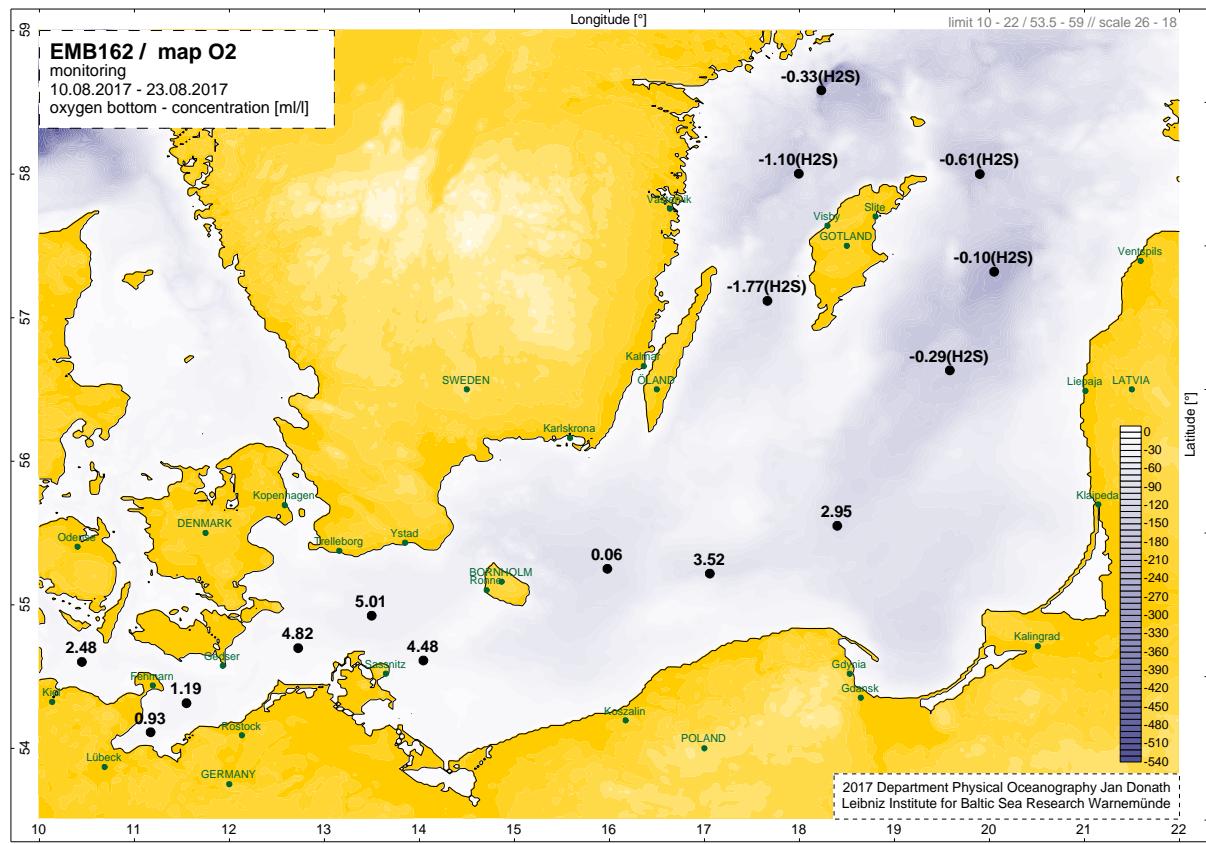

Figure 5: Oxygen concentration (ml/l) in bottom waters of selected Baltic Sea stations (H_2S is included as negative oxygen concentration) based on Winkler titration.

Hydrographic conditions, temperature, salinity and dissolved oxygen registered during the cruise are displayed in Fig. 4 and 5. Temperature distribution along the cruise track show the typical late summer conditions, with relatively warm surface near waters, declining temperatures below, showing signature of the old winter water of the previous year and slightly warmer waters close to the bottom, in the region stretching from Bornholm Basin to the eastern Gotland Basin (Fig. 4). Salinity in the upper surface layer declines towards the eastern Gotland Basin, whereas the salinity changes less in the bottom near layers, and mirrors the conditions after a major inflow event (S~12). Close to the bottom in the Bornholm Basin low dissolved oxygen concentrations (<1mm/l) were registered (Fig. 4). Those conditions were more frequent within the eastern Gotland Basin. In the Gotland Basin even anoxic conditions occurred and dominated the pattern in the water column between 70 m depth and the bottom. Hydrogen sulphide was also measured within Gotland Basin (Fig. 5)
